

Compaq Open Source Internet Solutions

Compaq Tru64™ UNIX on Compaq AlphaServer™ Systems

The best things
in life *are* free

It's **Tru@**

Compaq provides no-cost, best-of-breed Internet software, specially packaged for instant results

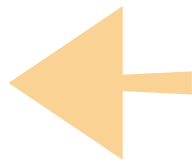

Imagine having the best Internet software in the industry together in one convenient location, all pretested, up to date, and ready to run out of the box. Add to that an automated installation utility, graphical administration interface, and Internet Monitor to make launching and managing Internet services fast and easy. Then picture the ideal price tag: \$0.00.

You're not dreaming. You get all this and more with every Compaq AlphaServer system running Tru64 UNIX — absolutely free. The reason is simple. We want you to get the most out of your technology investments.

The fact is, the Tru64 UNIX-based AlphaServer system is the ideal platform for Internet and intranet services, featuring astounding speed, awesome capacity, endless scalability, and virtually unstoppable availability. Open Source Internet Solutions from Compaq enable you to make the most of these industry-leading capabilities, offering a full suite of the most popular Web servers, mail and news servers, security products, file and print servers, directory and authentication software, Web development tools, and more — all fully integrated with the Tru64 UNIX operating system. Plus, the package is cluster-enabled with full support for Available Server Environment and TruCluster™ Server. There's no better way to build your success online.

COMPAQ

- **Centralized management utility** — a secure, Web-based administration utility that lets you centrally manage user account information as well as individual software components, all from a common interface
- **Internet Monitor** — allows administrators to monitor the performance of Internet services anywhere on the network, improving quality of service
- **LDAP Module for System Authentication** — leverages the centralized information in the LDAP directory, enabling highly scalable, system-wide authentication and authorization with tight integration to the *Tru64* UNIX Security Integration Architecture
- **Third-party, non-Open Source components** — including FrontPage 98 Server Extensions Resource Kit, Netscape Directory Server, and Netscape LDAP Software Development Kit — provided free or included with your *Tru64* UNIX license
- **Apache Web Server with SSL** — the most popular Web server packaged with a standards-based, commercial-grade XML tool kit makes it easy to incorporate XML capabilities into your applications
- **Mail servers** — sendmail (handles 70% of Internet mail traffic), Cyrus and University of Washington IMAP servers, Qualcomm POP3 server, Majordomo mail list management software, and Procmail mail filtering software
- **LDAP Directory Server** — provides scalable, centralized management of user information that is accessible by all applications
- **Security components** — Basic Merit AAA (RADIUS) Server, FireScreen firewall, TCP Wrapper, and Denial of Service (DoS) prevention tools ensure protection for you and your online customers
- **Washington University FTP Server** — a leading file transfer server with extensive security, access control, and logging features
- **Squid Proxy/Caching Server** — a high-performance caching server that supports FTP and HTTP data objects
- **Samba File and Print Server for Windows** — allows Windows clients to use UNIX file systems and printing services
- **InterNetNews (INN)** — a complete Usenet system that includes an NNTP server and a news-reading server
- **Internet Relay Chat (IRC)** — allows users to communicate in real time over a network of Internet or intranet servers
- **UNIX tools** — Expect, Perl, Tcl, TclX, TclTk, and tcl_cgi — for providing dynamic Web content

Just look

at what you get with this

comprehensive package

Open the door to exciting online opportunities

Open Source software is the very foundation of the Internet. In fact, all Internet, intranet, and extranet applications depend on it to deliver online services. Open Source is state-of-the-art software that is highly maintainable, which puts more control in your hands to support the software quickly and cost-effectively in-house. It also establishes a basic standard of operation and ensures interoperability among various Internet and Web-based applications. And with Open Source, the potential for obsolescence is all but eliminated.

Compaq delivers instant Internet services

Compaq Open Source Internet Solutions provide you with the best of Open Source software, all on one convenient CD, with added features to make creating, deploying, and managing Internet applications a snap. For example, installation is automated and all the software has been preconfigured, so you can get up and running quickly — no need to hassle with the details. In addition, since the software is all packaged together, you have easy access to the functionality you need. Plus, it's pretested to ensure reliable operation. And with a common graphical administrative interface for all the software, managing multiple Internet services is easy. What's more, you're assured of staying current on new releases, since Compaq issues updated versions of Open Source Internet Solutions every four months.

Build a successful online business right out of the box

Compaq Open Source Internet Solutions provide everything you need to create, deploy, and manage Internet services on one CD — fully tested and enhanced with automated installation and administration utilities. And it's yours free with every *AlphaServer* system running *Tru64* UNIX.

Maximize your competitive advantage by leveraging the power of Compaq 64-bit platforms and the instant Internet services you get with them. Contact your nearest Compaq sales representative or business partner. Visit us on the Web at www.tru64unix.compaq.com/
